

FRICITIONLESS DATABASE COST AND PERFORMANCE OPTIMIZATIONS

CONTACT: MARK.MOKRYN@GMAIL.COM

Founding team

MARK MOKRYN, CEO

30+ years of experience in product definition, strategy, and development

Key roles in both large corporates as well as strong startup experience

Founder of SANgate Systems (renamed Sepaton), acquired by HDS

Experienced in startup fundraising and M&As

DR. RAMI COHEN, CTO

25+ years experience in leading research, architecture activities, and R&D teams

Ph.D. in Computer Science from the Technion – Israel Institute of Technology

Numerous leading roles in startup companies, including VP of R&D in a cybersecurity firm

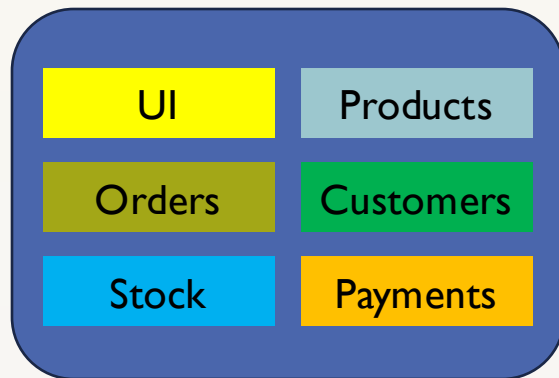

Data management crisis in modern apps

Cloud architecture drives up storage costs due to lack of centralized DB management

Loopy cuts database costs by over 50% by restoring control over data

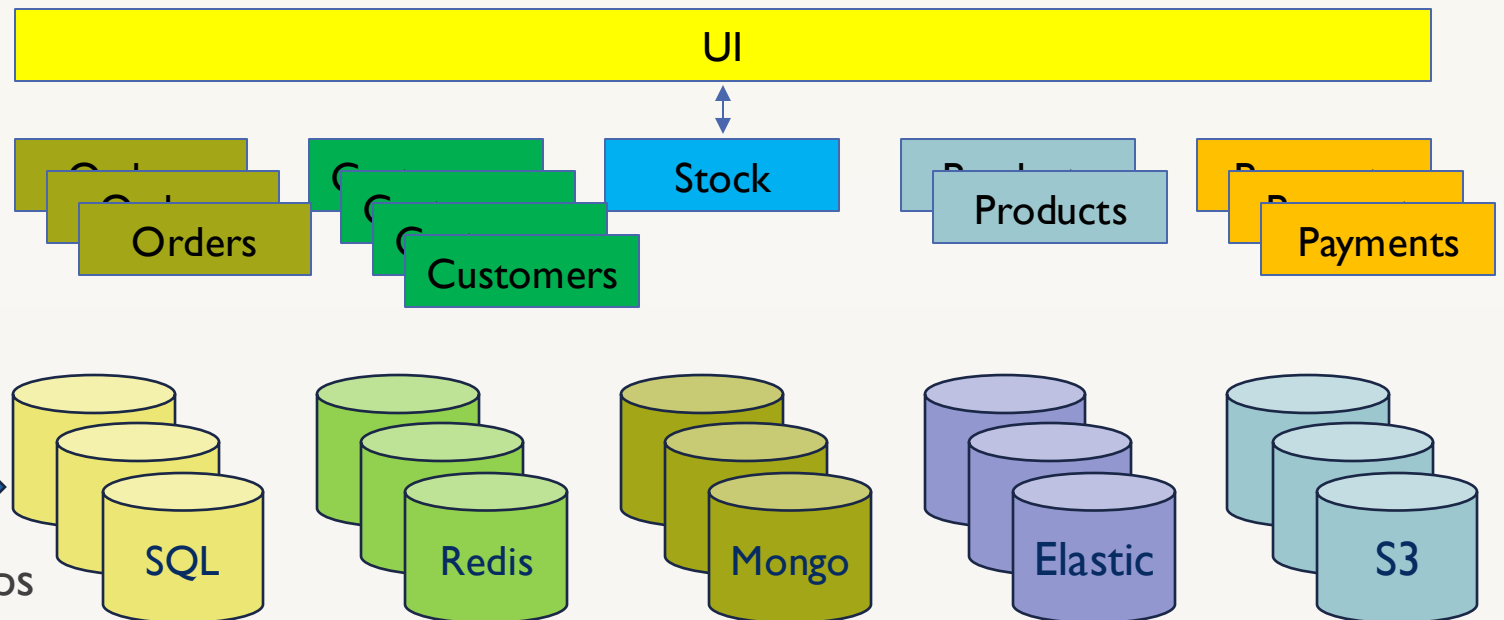

Scale-up app and storage

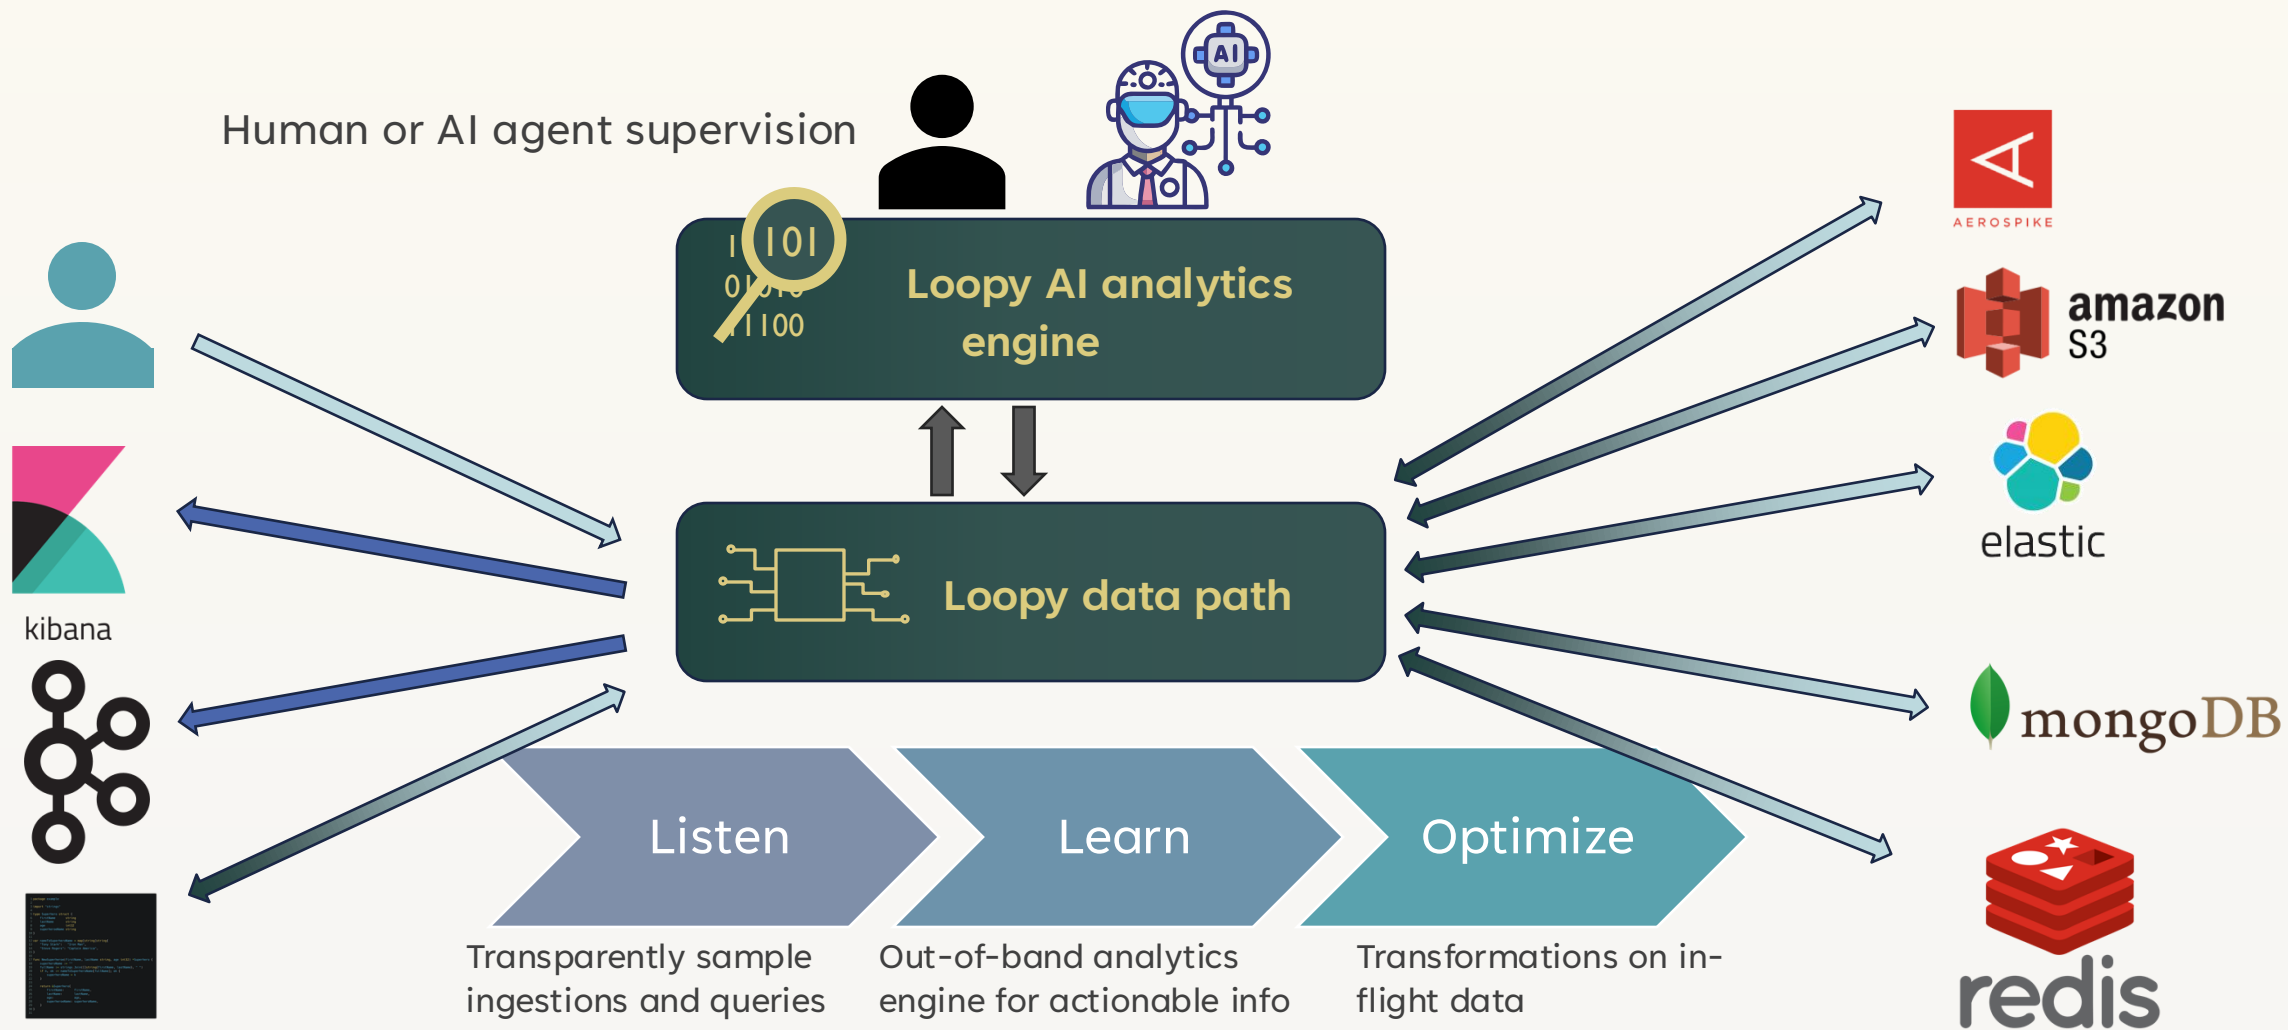

15 years

Dev-ops

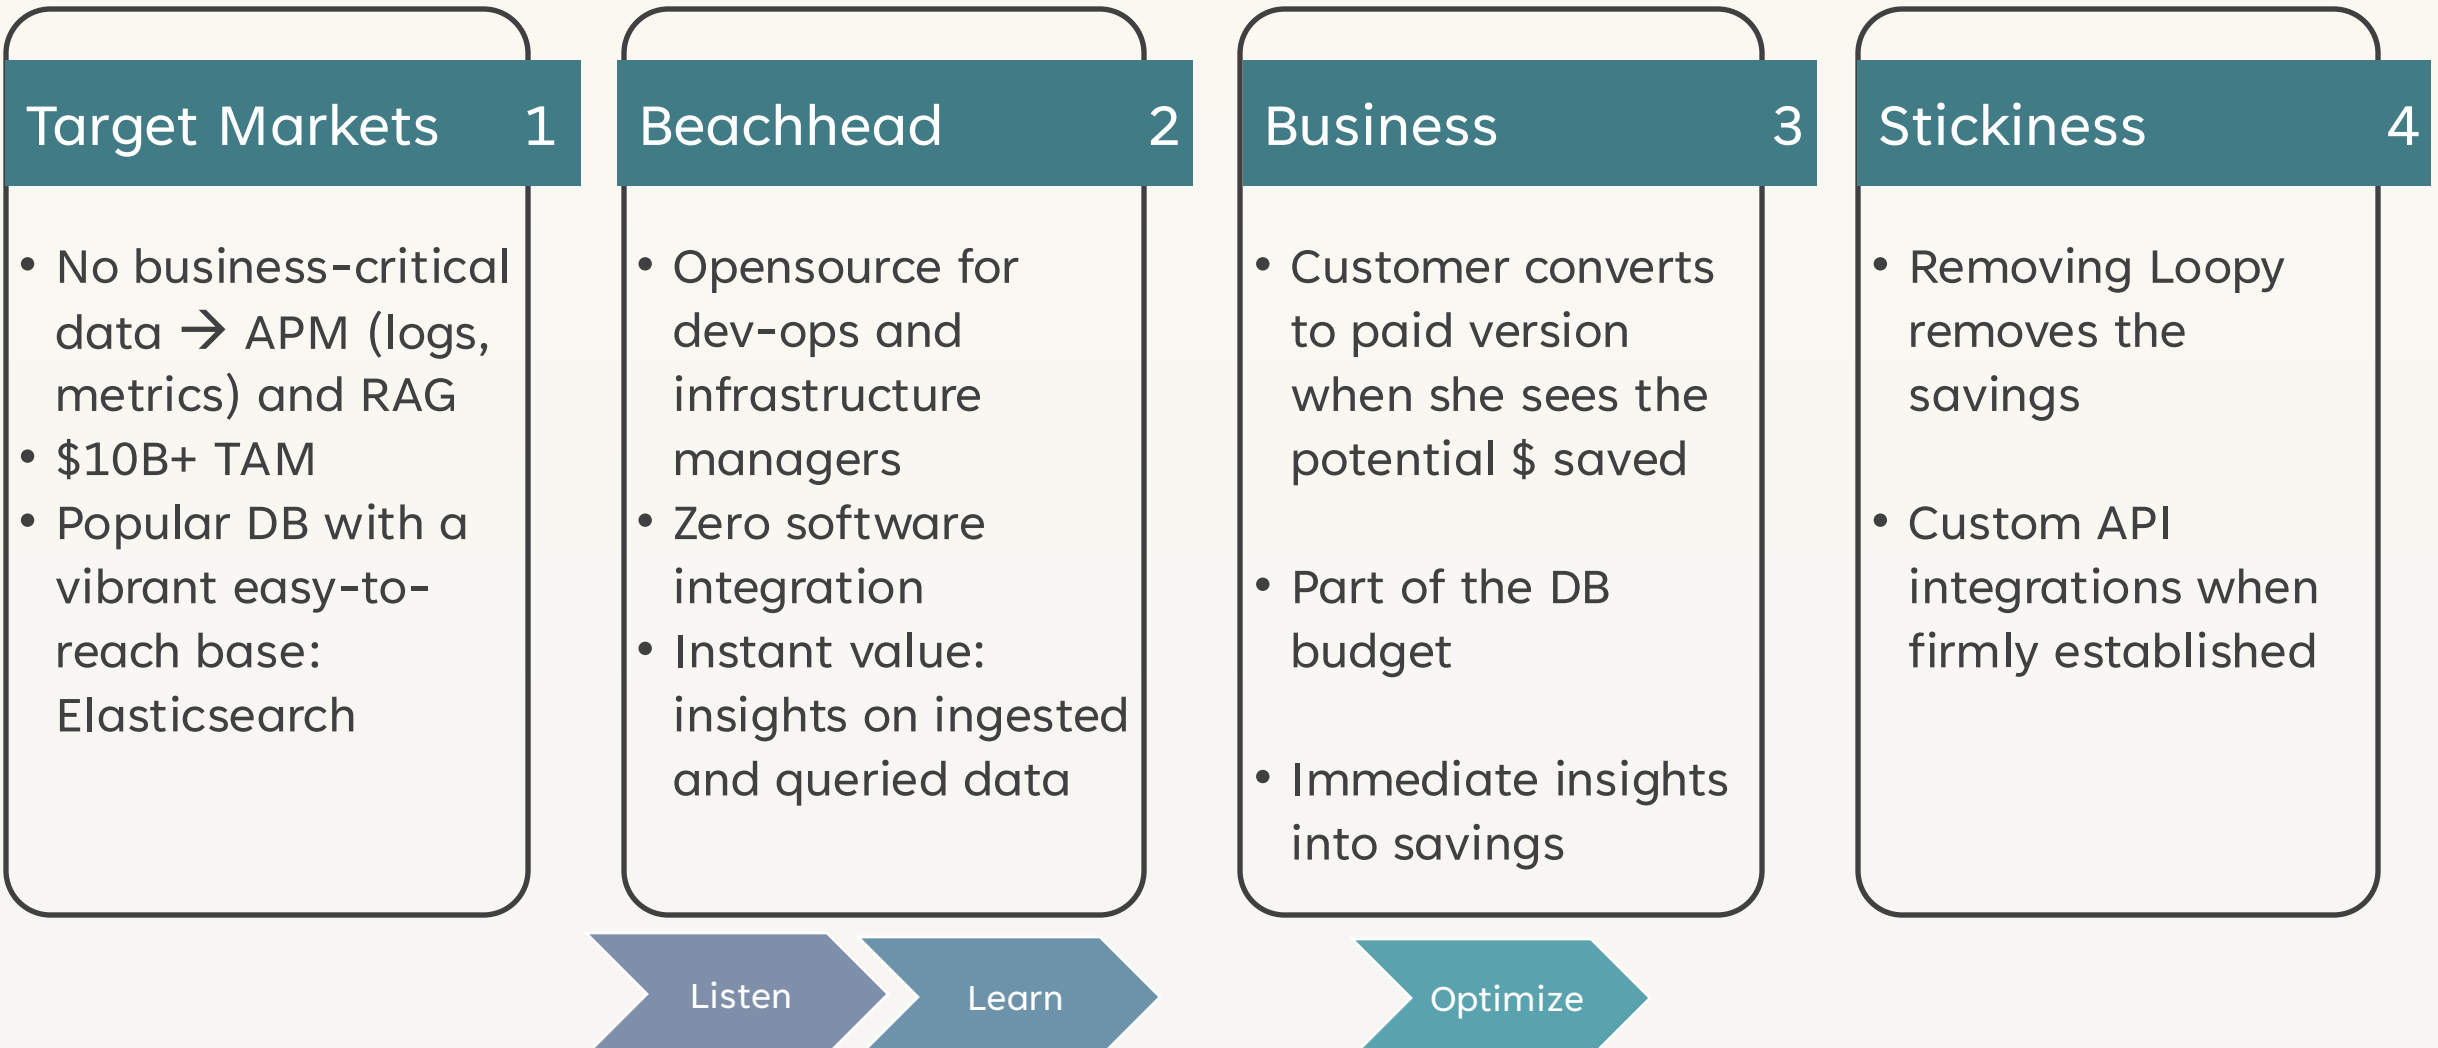

Scale-out microservices and polyglot storage

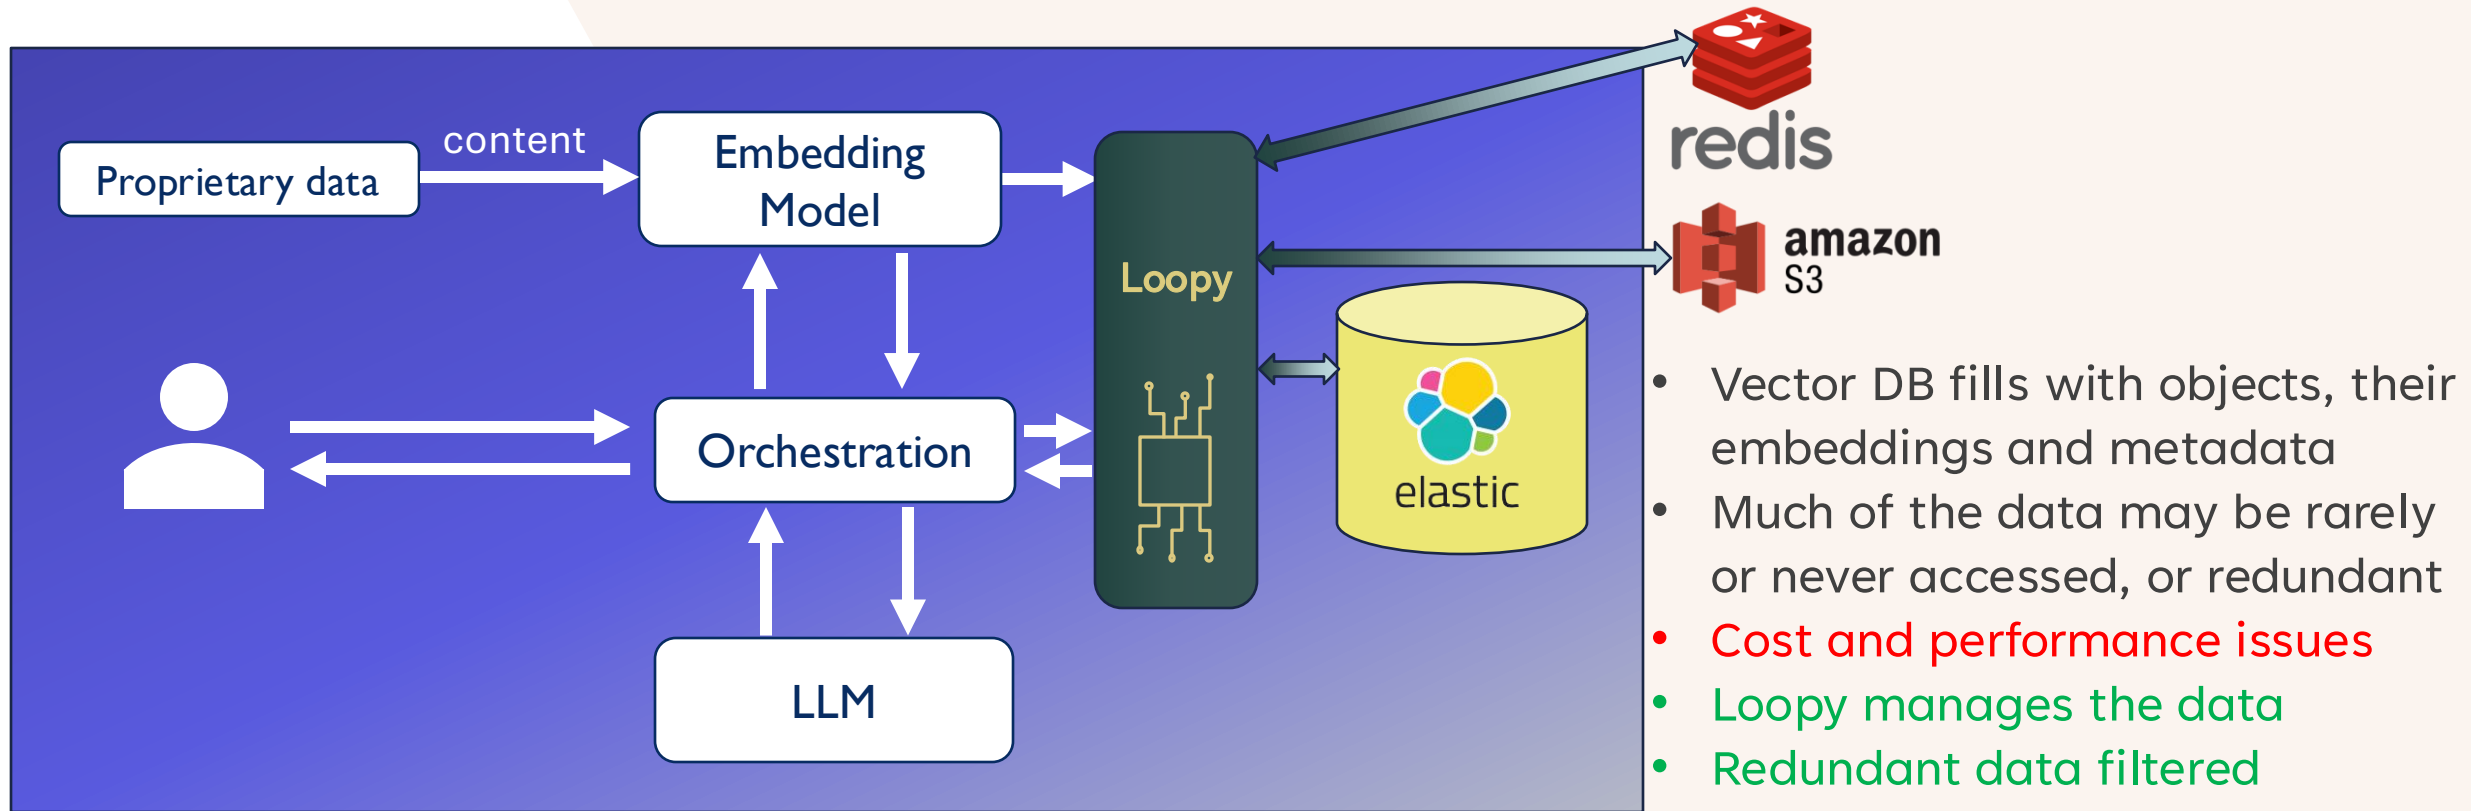

The Loopy solution

Go To Market

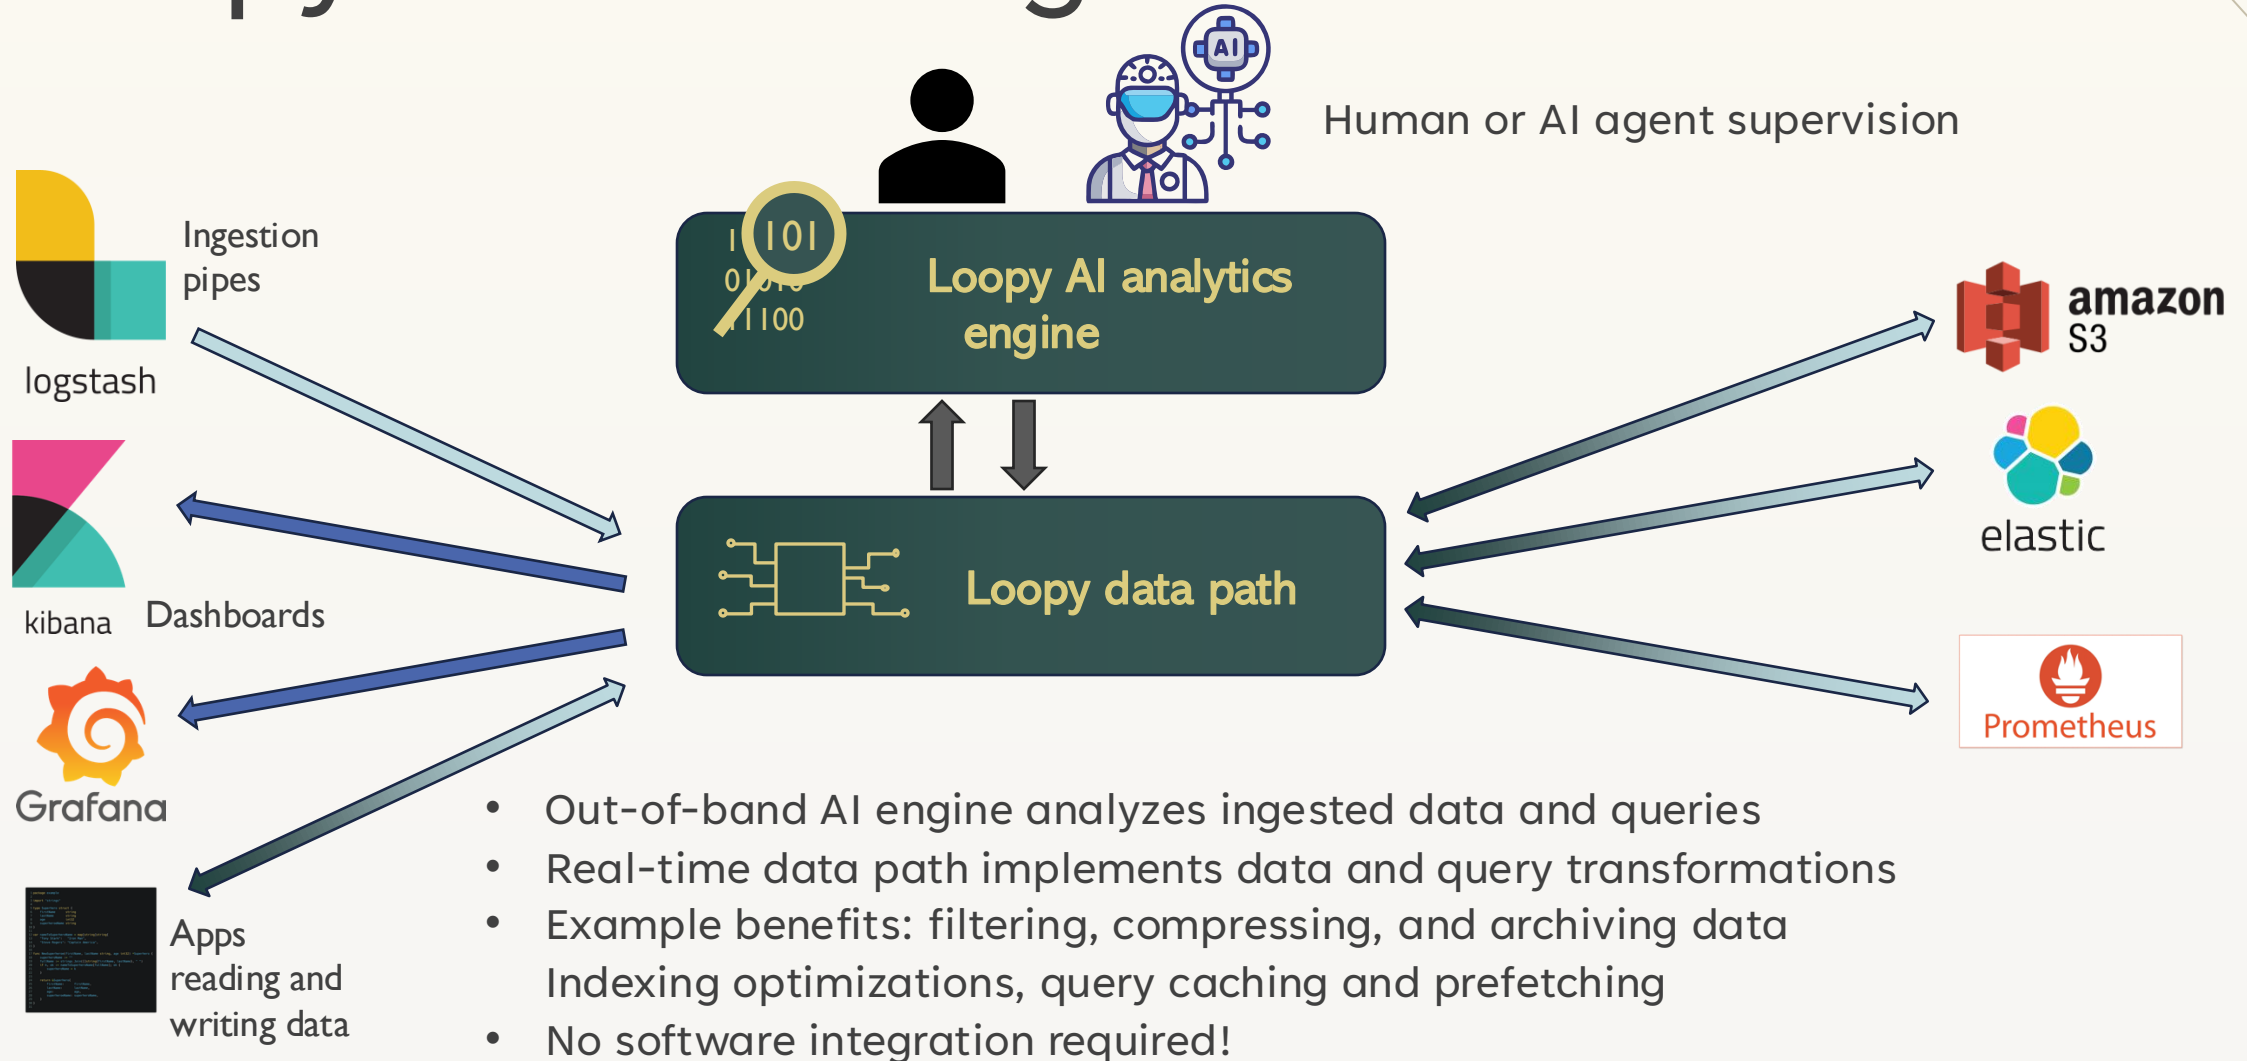

Optimizing data for vector DBs for RAG

Loopy applies optimizations on the data
Zero software integration by the customer

Loopy for APM logs

Business Model:

OpenSearch pricing	\$542/month	per node price
Customer Cost without loopy	\$54,200/month	small 100-node deployment
Loopy cost	\$5420/month	We charge 10% of the original cluster
Customer DB direct cost reduction*	\$21680/month	Conservative assumption of 60% reduction**
Total customer cost with Loopy	\$27,100/month	Removing Loopy removes the savings

* Plus indirect cost reductions such as DB management efforts

** Initial demos indicate that the reduction easily reach over 70%

Initial products address \$10B+

Vector DB Market (RAG)

\$1.5B 2023 → \$4.3B 2028 (WSJ May 21 2024)

Elastic the current leader in this space

Pinecone, Milvus, Weaviate, Qdrant will be supported based on customer priorities

SIEM logging space

Relevant once achieving customer trust

\$3B for Elastic, OpenSearch, and infrastructure

Logging and RAG DBs are the initial markets for first 3 years

The eventual target is operational savings and optimizations for the overall NoSQL market which is well over \$100B by 2030, and far more when including infrastructure costs

APM Elastic/OpenSearch market: \$7B+

- Elastic observability revenue
- AWS OpenSearch obs. Rev.
- Infrastructure for licensed and OSS

ICP: Elastic's 1400+ customers >\$100K

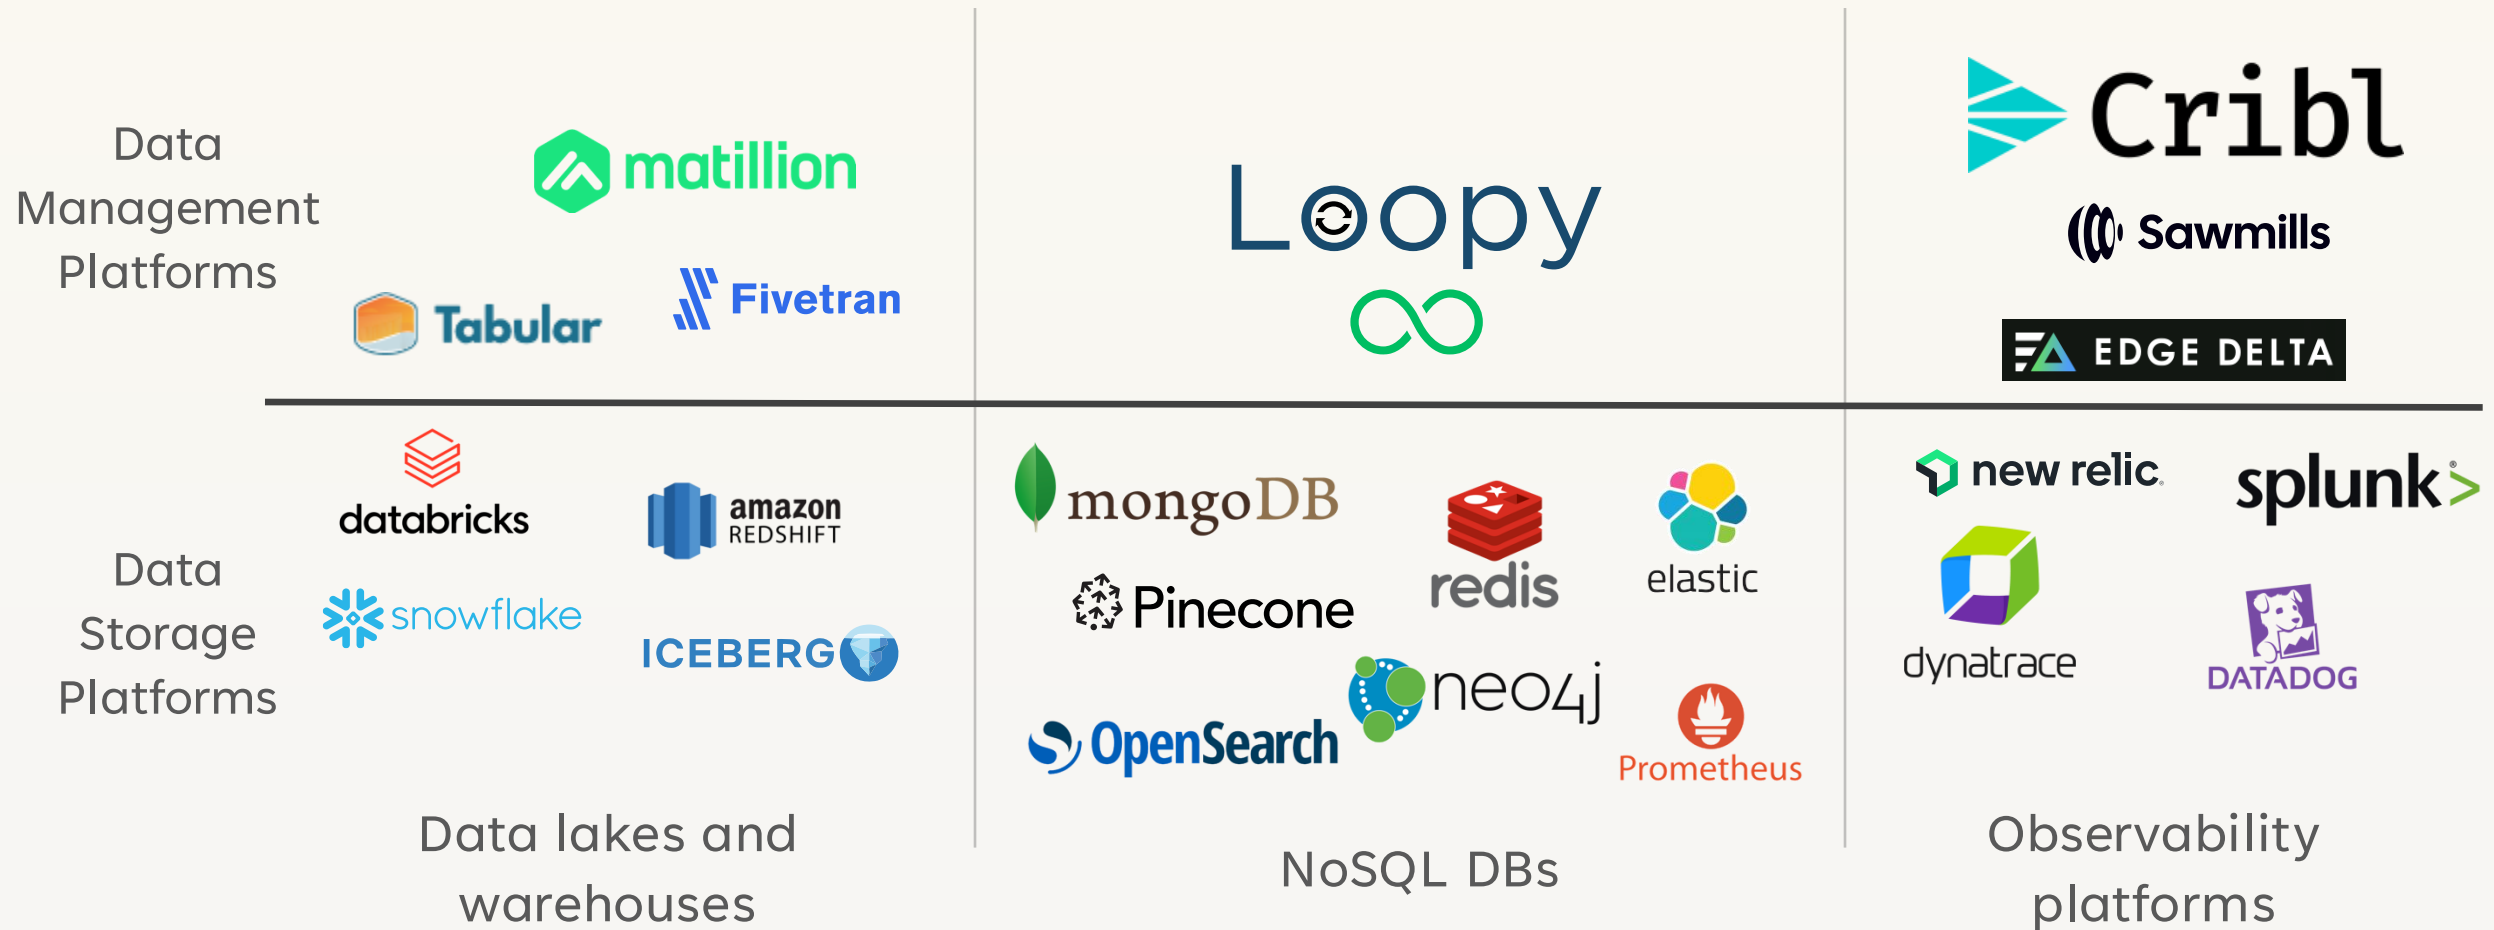

Elastic: \$1.5B run rate and 40% to APM

AWS OpenSearch estimated 2x of Elastic

Main customer and partner interactions

Customer	Main feedback
Redis	Spoke with VP of AI products: “When can I speak to customers about Loopy?” Using Loopy to integrate Redis vector cache into customer deployments with zero customer integration required
Spot	Discussions with their GM. They moved from self managed Elastic to Logz.io due to incapability to manage the logs. The are paying \$800k a year to Logz.io. If using Loopy this cost can be easily cut to \$150k
Bank Leumi	Spoke with the team managing Elasticsearch for bank’s cybersecurity Confirmed the need and lack of available solutions Willing to be a design partner and even contribute to open source product
Verizon	Discussions with network and infrastructure architects, managing PB-scale logging systems Corporate mandate to eliminate or reduce Splunk usage due to cost, and move to Elastic “What you propose is not available in the ecosystem and is definitely of value to us” “No one enables analytics on our logging patterns to help us save cost” Very interested in working with us moving forward
Mobileye	Discussions with cloud infrastructure team, managing 100s TB/day Also moving from Splunk to Elastic “We need a solution that spans cloud and on-prem deployments” Very interested in use Loopy once it will be ready.
Proofpoint	Discussions with Group VP managing 100 developers and \$1M/mo AWS bill, 10% on Cloudwatch Logs Would switch to Elastic or OpenSearch if we could cut 50%+ on database costs
Cybereason	Discussions with dev ops lead Interested in managing logs in Elastic BUT more interest in managing 2,200 Elastic servers for production data! Upcoming discussions with architecture team

Competitive landscape

Product plan

Product	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8
Analytics for Elastic logging (# ppl)	5	5	5					
Active cost reduction for Elastic (#ppl)			1	3	3	4	4	4
RAG cost reduction for Elastic vector DB (#ppl)				1	5	5	5	5
SaaS (#ppl)				2	2	2	2	3
Total headcount	5	5	6	6	10	11	11	12
Pre-seed phase (\$1.5M)								
Seed phase								

Product color denotes version availability
